Robotic Assist Tasks RATs

Living with RATs

What Humans are good at

- Humans are good at doing the daily tasks required in life
  - Cleaning the house
  - Cooking, serving drinks, hospitality
  - Painting the house, yardwork
  - Facilitating other Humans to do specific tasks
- Sometimes mobility issues and skill level require Humans to facilitate other qualified Humans to complete tasks
  - Motivating other Humans to complete tasks
    - Money, sex, meals, or other rewards
  - Managing the Task being Facilitated (watching others work)

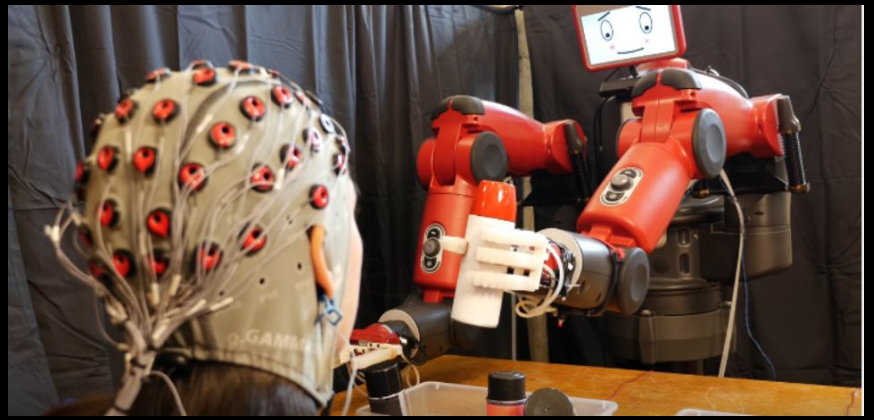

What Humans are NOT good at

Robot designed to help Humans with mobility issues complete everyday tasks

Robot will “plug into” Human neural network

Robot designed to complete a variety of Human tasks

- Cooking
- Cleaning toilets
- Yardwork
- Lifting
- Feeding and Walking the dog

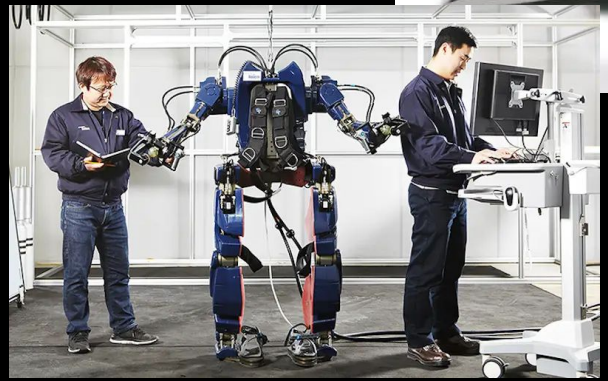

RAT Control Station

- Operator enters the Ecto Skeleton Rig
- Technicians calibrate Rig to Human movements
- Human Operator guides Drones to do individual tasks
- Station has Monitor to Oversee Drones completing tasks

Main Ectoskeleton Station

Ectoskeleton Rig integrates Human movements to Station

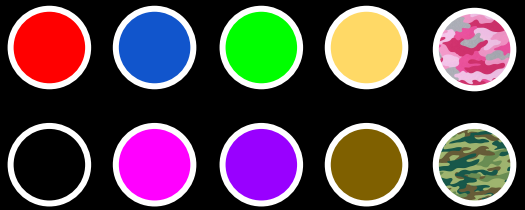

Ectoskeleton Rig

Rig custom tuned to individual Human for maximum performance

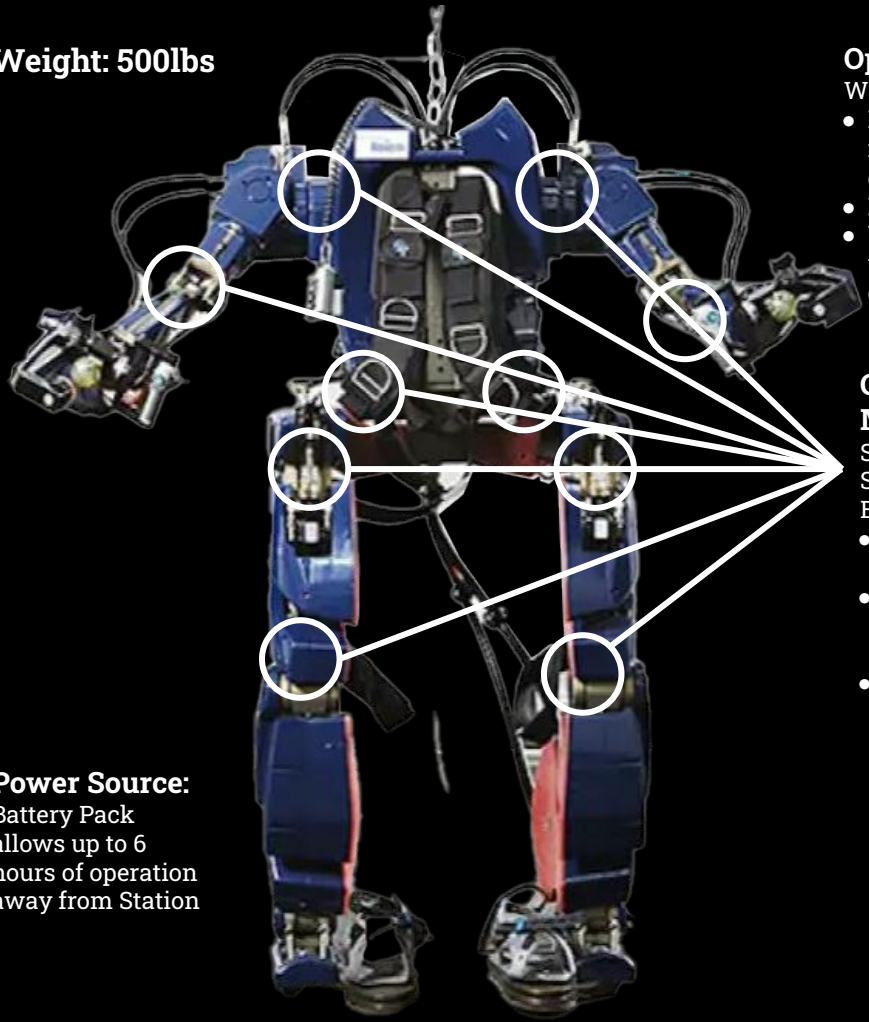

Plugs into Ectoskeleton Station
OR
Operates remotely for up to 6 hrs

Remote range up to 100 yards

Available in 8 colors

Weight: 500lbs

Operation:
Wireless Control via
- Lever grips for Hands includes buttons for gripping
- Footholds for Feet
- Various joints to mimic walking, reaching, and other body movements

Canadarm Motor Mechanical Joints:
Space Shuttle motors Synchronized Hip, Knee, Elbow, Shoulder motors
- Relieves stress on Human body
- Provides smooth unencumbered movements
- Synchronized to lock and unlock to natural human movement

Power Source:
Battery Pack allows up to 6 hours of operation away from Station

Back Support:
- Prevents Fatigue
- Provides Confidence
- Allows Freedom of Movement

Exo Station

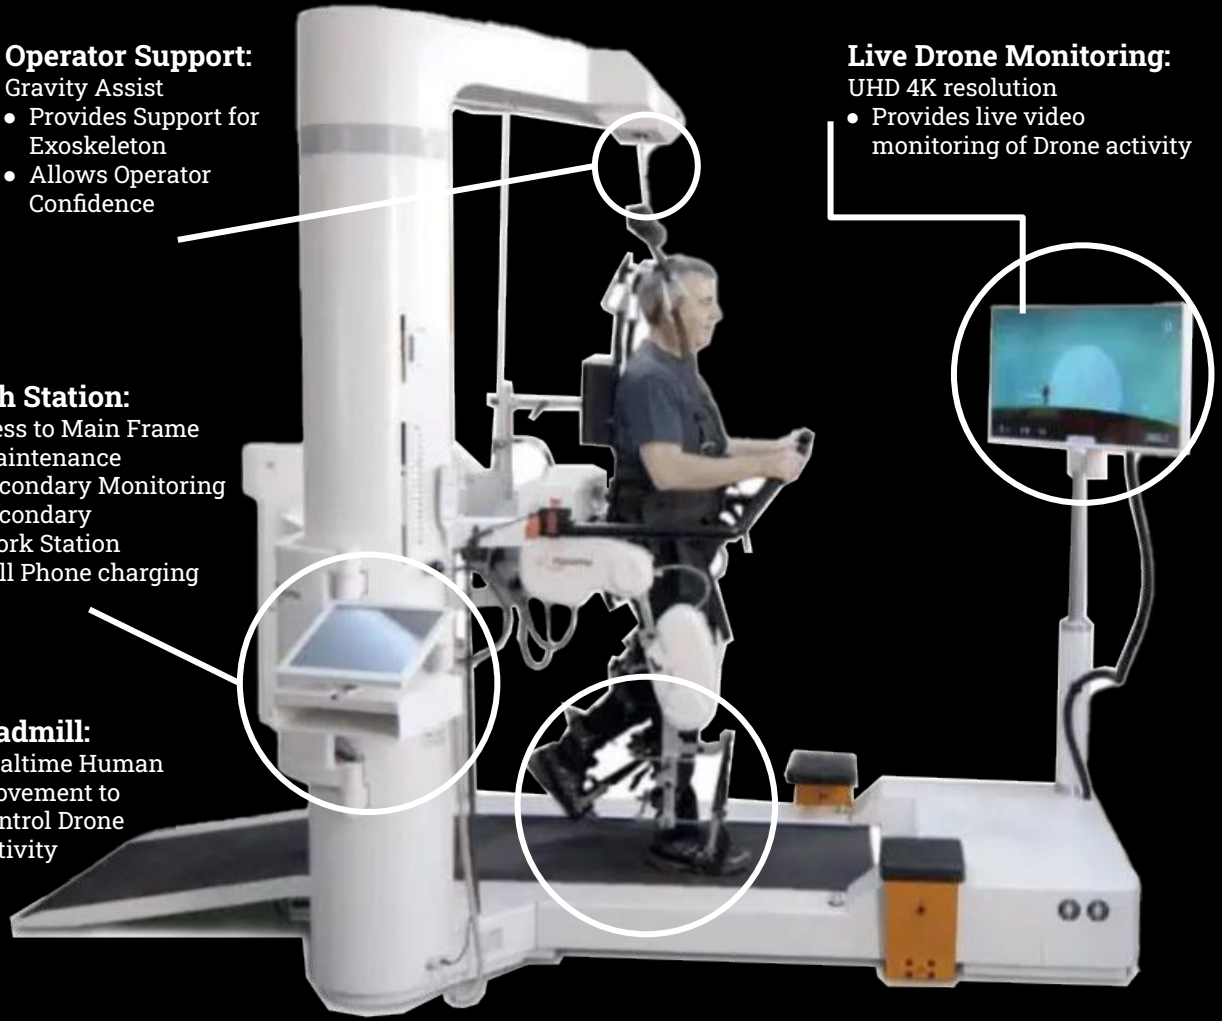

Provides Human interfacing with Drones

Provides monitoring of Drones

WIFI Connections to Drones

Bluetooth connection

Mac iOS, Windows 10, Linux

Operator Support:
Gravity Assist
- Provides Support for Exoskeleton
- Allows Operator Confidence

Live Drone Monitoring:
UHD 4K resolution
- Provides live video monitoring of Drone activity

Tech Station:
Access to Main Frame
- Maintenance
- Secondary Monitoring
- Secondary Work Station
- Cell Phone charging

Treadmill:
- Realtime Human movement to control Drone activity

I used to fear the robot apocalypse

But now, after seeing how dangerous stupid people can be…

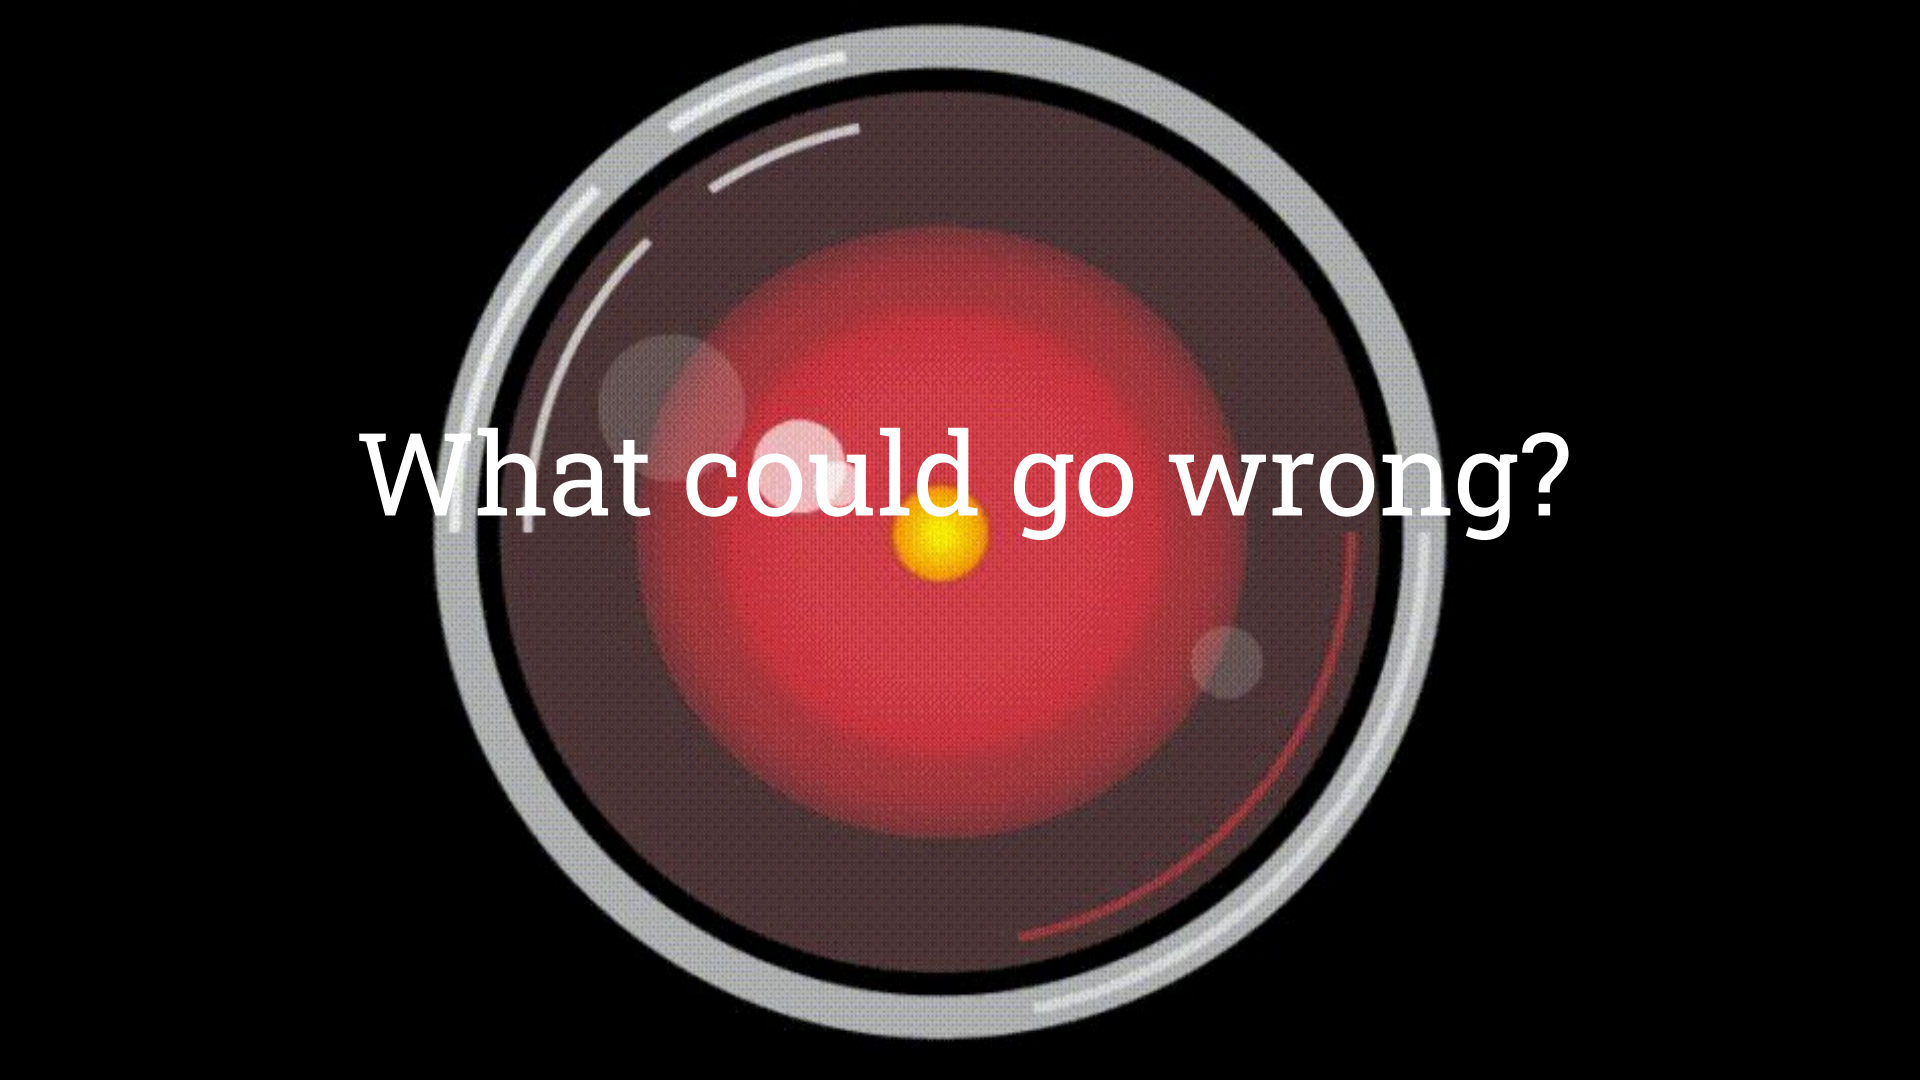

I'll take artificial intelligence over no intelligence any day.

Human Assistant Ectoskeleton

- Aids in everyday movements
- Puts wearer in ergonomic positions with minimal pain
- Regulates wearer's movements
- Smooth running servo motors gears

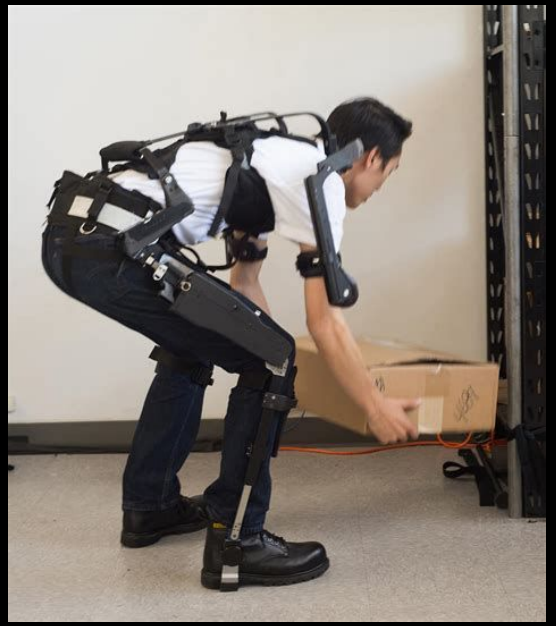

What could go wrong?

What can go wrong?

- Ecto jams while wearer is in a precarious position.
- Ecto can accelerate or decelerate at the wrong time
- Servo motors create jerky movements

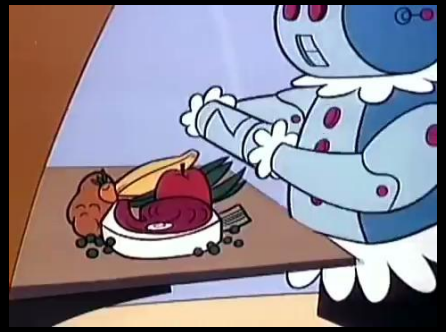

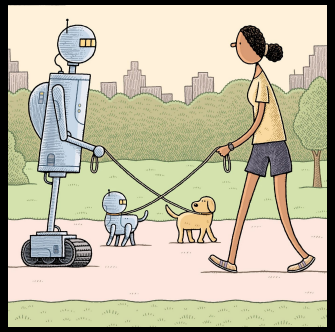

WHAT ELSE DO WE OFFER???

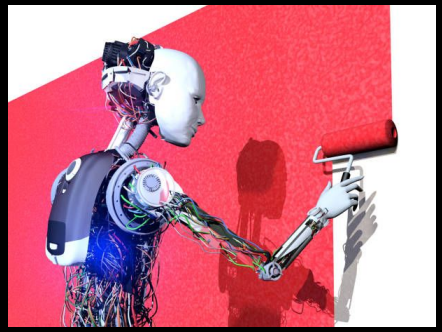

RAT Drones in Action

- Drones operate independently from the Station
- Drones perform Tasks and are managed by Human at The Ectoskeleton Station
- Drones provide real time status report with the main Ectoskeleton Station

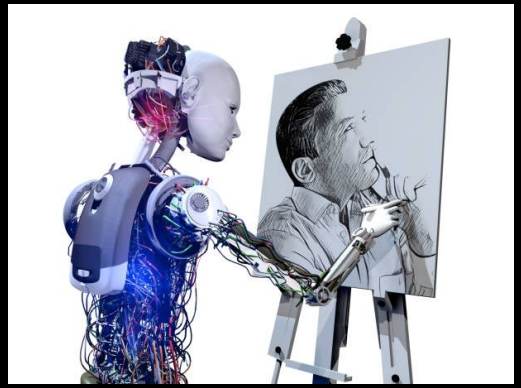

What could go wrong?

What can go wrong?

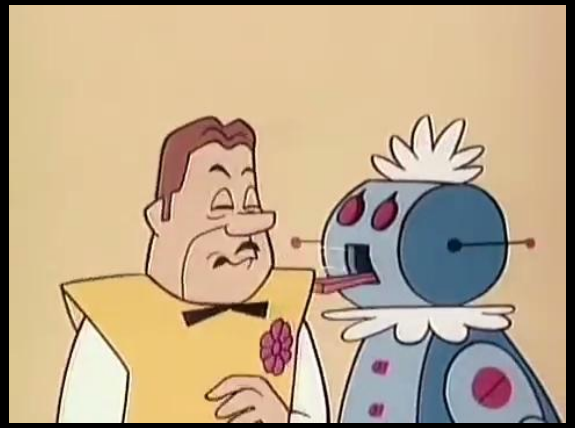

- RATs think they are smarter than Human
- RATs begin to “do their own thing”
- Station components glitch
- RATs produces obscene portraits
- Human generates affection and real life emotions to RATs
- RATs think about replacing human for both heavy work and easy work

What ELSE can go wrong?

WARNING
OPERATOR MALFUNCTIONS MAY ALSO OCCUR

RAT OWNER REVIEWS

Human excel & needs; slide 7,8,10,11,16; script; creative content.

I <3 my RAT3D… Brenda

Slide2,3,3,5,...; HAL, images and video clips.
RATexo Gym Station let me be like THE ROCK - Smart and Strong!

Angel

Slide edits 2,3,14,15,16; creative content, script iteration, add images. My RATcuum works great. Assembly was required.

Sharon
